

ClippaNet – the FT12 machine

- Foot or pneumatically operated
- Suitable for a wide range of products
- Can produce jumble packs or in-line packs
- Requires no electrical power to operate
- A cost-effective net packaging solution for non-continuous or lighter duty

ClippaNet

ClippaNet FT12 clipping machines are ideal for packing a number of products in net, in either jumble pack or in-line form, using standard net tubes of 140mm or 100mm diameter. Products suitable for packing with these machines include fresh produce, bulbs, toiletries, cheese, soaps, chocolate coins, etc. For special applications alternative tube sizes are available enabling smaller and larger products to be packed with ease.

These easily transportable manually-operated machines are suitable for use with tubular form extruded net or knitted net. They are ideally suited for smaller net pre-packing volumes or where a wide range of products to be packed exists.
